Instructions to test the Delhi Busses: GTFS-RT feed – DTC, DoT Dataset API's shared via email:

Upon successful approval of the dataset, you will receive an email containing the access URL and token. Paste the URL as demonstrated in the image below.

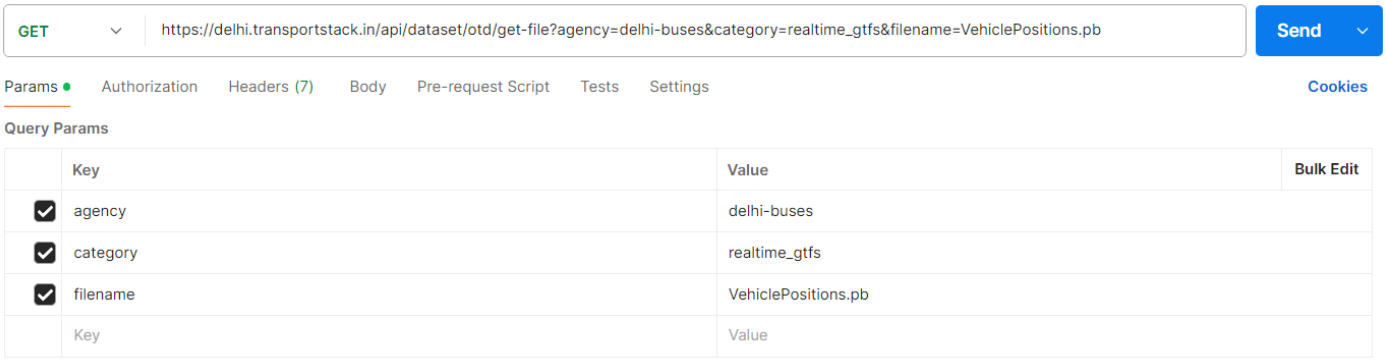

API URL: https://delhi.transportstack.in/api/dataset/otd/get-file?agency=delhi-buses&category=realtime_gtfs&filename=VehiclePositions.pb

Description: Fetches real-time updates on bus locations across various routes, facilitating efficient tracking and management of bus operations.

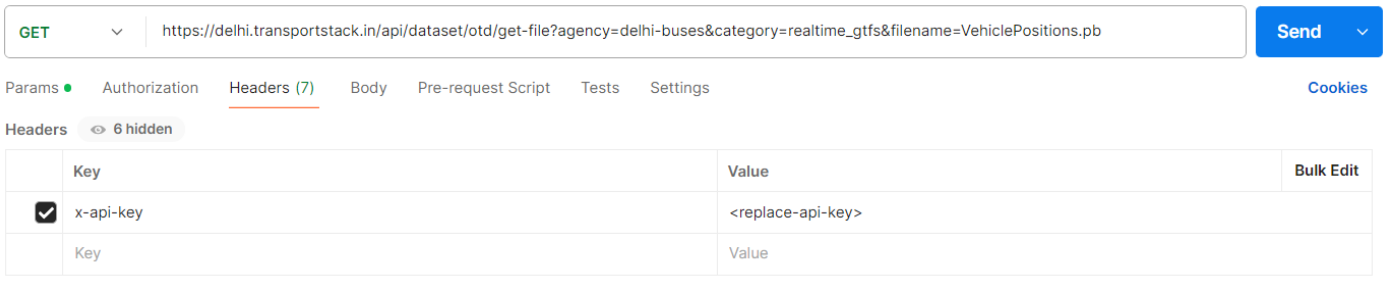

Sample Query Params:

Parameter Name	Type	Description	Example Values
agency - *required	Param	Name of the agency whose data is being requested	delhi-buses
category - *required	Param	category of the dataset	realtime_gtfs
filename - *required	Param	filename of the dataset	VehiclePositions.pb
x-api-key - *required	Header	API Key for authentication	Use the API key received in email

Postman:

Enter the **Access-Key** received in the email into the request header as shown in the image below. The header name should be **x-api-key**.

Click on send button to see response.

CURL:

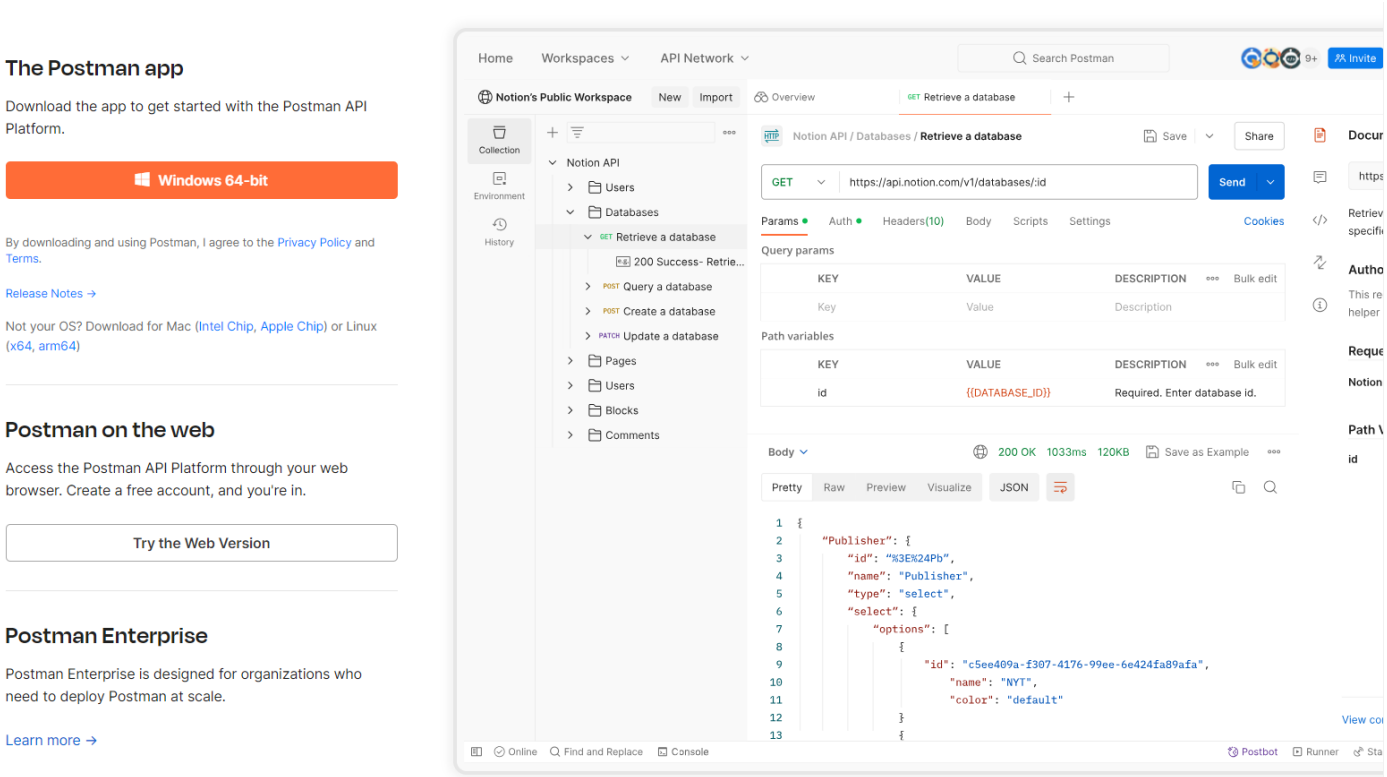

curl --location 'https://delhi.transportstack.in/api/dataset/otd/get-file?agency=delhi-buses&category=realtime_gtfs&filename=VehiclePositions.pb' \

--header 'x-api-key: <replace-api-key>'

Instructions to download and install postman:

Step 1: Download Postman

Link: https://www.postman.com/downloads/

Step 2: Run the Installer

- Locate the downloaded installer file, usually named something like "**Postman-win64-Setup.exe**".
- Double-click on the installer to begin the installation process.

Step 3: Installation Wizard

- Follow the on-screen instructions provided by the installation wizard
- Accept the license agreement.
- Choose the installation location or stick with the default.

Step 4: Launch Postman

Once the installation is complete, click on the “Run Postman” checkbox in the last step of the installation wizard. This will launch Postman immediately after you click “Finish.”

Step 5: Sign In or Create an Account

Upon launching Postman, you’ll be prompted to sign in or create a new account. Signing in allows you to sync your data across devices and access additional features. If you’re new to Postman, you can sign up for a free account.

Otherwise, you can continue with the lightweight API client.
