Delhi Buses: GTFS-RT Feed - DTC, DoT

Link to dataset:
https://delhi.transportstack.in/data-services/datadetails/7

About the dataset:

The Delhi Buses: GTFS-RT Feed dataset provides real-time transit information for buses operated by the Delhi Transport Corporation (DTC) and Department of Transport (DoT). This dataset follows the GTFS -RT (General Transit Feed Specification - Real-Time) standard, which is an extension of the static GTFS feed, offering live updates for various aspects of transit service.

The Vehicle Positions file provided contains the real-time locations of buses in operation.
Data fields include vehicle ID, route ID, latitude, longitude, and timestamp of the last location update, enabling accurate bus tracking.

#	Field Name	Description
1	vehicle_id	Unique identifier for the vehicle.
2	route_id	Identifies the route associated with the vehicle.
3	latitude	Latitude of the vehicle's current position.
4	longitude	Longitude of the vehicle's current position.
5	timestamp	Timestamp of the last location update.

More information about GTFS data can be found here - https://gtfs.org/documentation/schedule/reference/
