About the dataset
The DMRC Monthly Origin-Destination (OD) Flow dataset provides detailed monthly passenger flow data between metro stations in the Delhi Metro network. Each month is represented as an individual file, capturing the passenger counts for trips from each origin station to each destination station. This dataset captures monthly Origin-Destination (OD) flows, providing insights into travel patterns and demand between Delhi Metro stations over time.

1. OD Flow Metadata

#	Field Name	Description
1	Stn	Origin Station Code
2	Other Columns	Represent destination stations by code, with each cell indicating the passenger count from the origin (row) station to the destination (column) station
